

## An urban park dedicated to sport and ecology

(Lyon, France)

Clos Layat park completes the green belt of Lyon. Built in a former wasteland, the park is designed as an island of greenness dedicated to outdoor activities and biodiversity. Our discreet lighting preserves the ecological vocation of the park as well as accompanying its sporting activities: green LED solar lighting along the running track marks the way, motion sensors are integrated in the undergrowth lighting fixtures, LED, etc. The kid games are illuminated

with an artificial tree made of green fluorescent tubes to attract visitors from the street. The project was awarded for its environmental quality as part of the «Public Spaces and Landscape» prize of CAUE.
