

Place du Souvenir - Lighting Master Plan of Rennes

(Rennes, France)

Place du Souvenir is the heart of a residential district located near Rennes train station. Attractive lighting of the square will enable it to become a real space for meetings and exchanges between the inhabitants of the district once night falls. In order to revitalise this heart of the district, we recommend the use of large poles equipped with RGBW (colour changing) projectors and gobos (ground-based image projection). This type of

lighting gives identity to this space by making it easier for the inhabitants to appropriate it. Various scenarios can be programmed in order to respond to the new uses of the square. In addition, we recommend functional lighting on the periphery to meet the lighting levels of the EN13201 standard and to ensure safe movement for users.
