

## redevelopment of a seaside town

(Mauguio Carnon, France)

Mauguio Carnon is developing a master plan for the development of the area, with the aim of improving the urban organisation, finding a balance between the needs of residents and tourists, but also of revealing the natural environment and developing soft travel. In this context, the lighting guide plan aims to calm the Carnon station in order to obtain a more comfortable and uniform lighting background, without dazzle or visual disturbance,

and by limiting light pollution as much as possible by integrating a black screen to preserve biodiversity. The lighting accompanies and identifies the circulation and public spaces. The main street benefits from a special scenography, as does the port, the heart of this seaside town.

**contracting authority**  
city of Mauguio  
**architect - urban planner**  
Gautier+Conquet  
**landscape designer**  
agence APS paysage  
**engineering**  
Egis / A.I.A  
**lighting design**  
les éclaireurs

**surface area**  
12 ha  
**budget**  
5 465 000 € e VAT  
**completion**  
2024
