

Arena Futuroscope

(Poitiers, France)

The project has taken into account the programme's requirements in terms of the potential and quality of hosting sports and cultural events. The hall is designed to provide unforgettable experiences. It is perfectly modular and its asymmetrical design allows for a dedicated staging of the activity. We design all the outdoor spaces, the lighting of the building and the interior spaces. Special attention is paid to the integration of the sports

lighting of the hall - whose effects and broadcast compliance we calculate - as well as the lighting mood of the hall.
