

Water park

(Toulon, France)

Aquatic complex comprising an outdoor pool, an indoor sports pool, an indoor leisure pool, a wellness area with spa, sauna, hammam. The complex also includes a sports centre linked to the neighbouring rugby fields, administrative areas, etc. The interior lighting is designed to enhance the volumes, the play of transparency and perspectives by integrating completely into the architecture. The external areas are partially lit with a graded light level: more light

around the building and less light in the background. On the periphery, discreet lighting ensures safe movement while respecting the environment (residential area and forest). Architectural competition dropped.
