

an office building with an organic lighting design

(Limonest, France)

An office building with an original shape, LIME is a curved structure. This fluid form goes hand in hand with flexibility of use. The lighting design accompanies these movements. From the outside, the flexible design is emphasised. In the atrium, under a large glass opening, wallwashers combined with natural light accentuate the verticality of the

core. For the offices, the lighting design is integrated into the false ceiling, discreet and environmentally friendly with glare-free lighting effects and energy-saving systems. The lighting is flexible to accompany changes in the space. © Guillaume Perret
