

In Nouméa, the Jules Ferry docks, a new night attraction

(Nouméa, New-Caledonia)

To revitalise its city center and its seaside, the City of Nouméa is carrying out an urban development operation on the Ferry docks to create an attractive waterfront that will allow the city center to be reconnected to the sea. The lighting project offers the quays the role of Nouméa's port showcase for cruise tourists and a major role in the night life of the nouméans. A set of colourful light effects are reflected in the harbour of the mirror city.

Our mission goes to building lighting design to public spaces and includes dynamic illuminations.
