

Les éclairéurs

Les éclairéurs are looking for Two experienced lighting designers, project managers, speaking French and English

Les éclairéurs is a lighting design and lighting agency with a **plastic and technical approach**.

Our office has solid experience in the contemporary lighting enhancement of public spaces with a high image impact, urban complexes and public parks. The company is characterised by a scenographic approach to space, creating urban wanderings, making the space legible, playing with the temporalities of the city and its uses to better support them.

Our office, built on attentive, young and creative personalities, claims to listen to the actors, their expectations, their use of the places, the history of the sites, in order to make simple, creative and relevant projects emerge, adapted to the places in which they take place; "tailor-made" in short.

The agency benefits from a solid experience in **architecture, scenography / mueography, and road structure**, with very simple, energy-saving and maintenance-friendly lighting designs. For each of our projects, we work with lighting effects that are integrated into the architecture and develop a sensitive and poetic approach to light.

Finally, the company is distinguished by its **complete command of lighting engineering**.

Post

- lighting designer, french and english speaking. 2 to 4 years experience minimum.
- CDI 35 hours, trial period of 2 months renewable.
- Applicable collective agreement for design offices IDCC 1486.
- "Cadre" or "ETAM" post, according to experience and competence
- Salary according to the agency's grid and the collective agreement

The team is young and dynamic, composed of 9 lighting designers and 2 people in charge of development. Each designer is a project manager, with privileged fields of competence.

Missions :

- Design interior and exterior lighting projects
- Design the electrical networks and associated civil engineering.
- Follow the company's public and/or private contracts from the design study phase to the completion monitoring phase. Knowledge of the French MOP law is essential.
