

## France Pavilion - Expo 2020 Dubai

(Dubai, United Arab Emirates)

Expo 2020 Dubai will host the world for 173 days, each one brimming with new experiences. For the lighting theme, the pavilion offers a fresh flow behind a large wall animated with videos of artists, a support for French excellence and creativity. We have designed all the audio-visual sound, video and light equipment for the external project. The interior lighting of the pavilion's scenography is articulated around the central hexagon, from which a cosmogony of

technological excellence and French talent is deploying. A ceiling of luminous lines and large shades of light animate this scenography. In the middle of an interactive map of France is bathed in a lively and white atmosphere.
