

Leading multimedia library

(Saint Just - Saint Rambert, France)

HEQ lighting design and illumination of the new network head end media library. The media library floor is designed as a free platform with a global lighting layer in which dedicated lights on poles reinforce the reading and working points. These mobile and intelligent reading devices (presence detection, light sensor) are specifically designed. On the ground floor, lighting of

the offices, the auditorium and an art exhibition hall. At the heart of the building, a large patio creates a green lung. At night, it is a strong sign of the building's identity.
