

## Requalification of a sensitive district

(Annemasse, France)

Lighting design of the entire district under ANRU agreement: the market square and its large mall, landscaped areas, connection with the BHNS. The project aims to revitalise the economy and the image of the district. The project solves problems of insecurity by closing the internal alleyways of the Auditorium building and covering a new facade for this major

community-scale facility. A consultation strategy and specific collaboration tools are developed (light training, enhancement of the new identity of the district by means of current music clips filmed in the district, etc.).
