

Night walk in a new district of Lyon

(Vénissieux, France)

The lighting project features the site's major landscape elements in order to structure the user's walk, from the East-West groove catch to the central pedestrian square. Specific lighting effects make up the reading and identification of the spaces. Dynamic lighting on the green valley reveals the changing landscape over the seasons with adapted shades of coloured light and leads

visitors to the pedestrian square. The central square, as a major link for commercial, restaurants and future office buildings, offers a warm and calm luminous atmosphere with material effects on the ground.
